

Lantana-Poinsettia Pump Station

PROJECT DETAILS

PROJECT ID	1001527
DEPARTMENT ID	SW50007
CONTRACT ID	26-C-
PROJECT TYPE	Stormwater Engineering
PROJECT STATUS	Consultant/Contractor Selection Process
PROJECT PHASE	P3: Procurement
NEIGHBORHOOD	North Tampa Community
COUNCIL DISTRICT	5
COMMUNITY REDEVELOPMENT AREA (CRA)	Not in a CRA
FUNDING SOURCE	Stormwater Improvement Fee
FUNDING COMMENTS	No additional funding comments

ESTIMATED PROJECT COST

\$1,100,000

Funded: Yes

ESTIMATED SCHEDULE

CONSTRUCTION FISCAL YEAR	2027
PROJECTED START DATE	01/04/2027
PROJECTED END DATE	01/03/2028

PROJECT DESCRIPTION

The project will construct a permanent stormwater pump station to address persistent flooding at the intersection of Lantana Avenue and Poinsettia Avenue, where a temporary pump is currently used to drain the low-lying area. The project includes property acquisition and installation of a new stormwater collection system, along with a new pump station and force main that will connect to the existing drainage system on North 11th Street. The new station will be remotely monitored and controlled through the City's SCADA system, improving long-term reliability and flood mitigation for the surrounding neighborhood.

Currently a temporary pump is utilized to drain the low-lying area along E Poinsettia Avenue between N Brooks Street and N Lantana Avenue. The proposed project will replace the temporary pump with a permanent pumping station.

COMMUNITY BENEFITS

Flooding Relief | Improve Traffic Flow and Safety
