PROJECT DESCRIPTION

Approximately 15,211 linear feet of water mains ranging from 2 to 4 inches in diameter will be replaced and upgraded.

COMMUNITY BENEFITS

The Oakford Park Phase I project will improve the City of Tampa's water distribution system by replacing the existing water mains. This project will replace the aging water mains in this area with new and larger diameter water mains, improving water pressure, water quality, and increasing the capacity of the system while reducing the number of service interruptions that might have been caused by main breaks or leakage.
