PROJECT DESCRIPTION

This project provides for the installation of a new standby diesel generator at Swann Pumping Station. The diesel generator will provide backup power, so the station remains in operation in the event of a power loss.

COMMUNITY BENEFITS

The pumping station rehabilitation project will restore the station's reliability by replacing the aging equipment and will include improvements to reduce vulnerability to extreme weather events. The station is a critical wastewater asset and failure of the station would result in a wastewater overflow that would impact the environment and pose a public health threat to the surrounding neighborhoods.
